8. Test Approach / Test Strategy

Describes **how testing will be performed**.

The test strategy for Amazon will include manual testing with automated testing(**Selenium With Java**) where time/need permits. Automated testing will be used to test the basic Interface objects keyboard and mouse navigation or any redundant tasks best translated to automation. Automated testing will be limited to a Win-64 platform because of Automation tool limitations.

- Sanity test will include an very short battery of tests to ensure the Naukri1.0 runs/launches and can connect to the back end database(**MySQL /SQL Server 2025**). Test execution will happen as individual component testing. These tests will be fully automated.
- **Acceptance tests** will include a short battery of tests that will only touch major features to ensure Naukri1.0 will operate smoothly at a basic level. These tests will be executed on **Windows 11 Home Single Language**. The goal will be to automate all of these tests.
- Full Functional tests will include a **comprehensive test** of all features listed in this document. These tests will be limited to the Windows 11 pro. These test will include automation with time allowing.

The usability testing will be accomplished by verifying the information in each window are accurate. Menus, icons and toolbar functionality will be tested as applicable to the navigation and results panes. Multi Window Overlapping will be tested because product supports opening of multiple documents.
