

TRANS INDIA HOLIDAYS Application

Team-6:- Name- Kuldeep Sharma

Bug ID: BUG-001

Bug Title: Name field accepts numeric and special characters in the Enquiry form.

Description

The **Name** field in the Enquiry form accepts numeric values and special characters. The field should only allow alphabetic characters (and optionally spaces) to ensure valid user names are entered.

Steps to Reproduce

1. Open the application.
2. Navigate to the **Enquiry** page.
3. In the **Name** field, enter 123456 or John@123.
4. Fill the remaining required fields.
5. Click **Submit**.

Expected Result

The **Name** field should accept only alphabetic characters (and spaces, if allowed). If invalid input is entered, an appropriate validation message should be displayed, such as:

"Please enter a valid name using letters only."

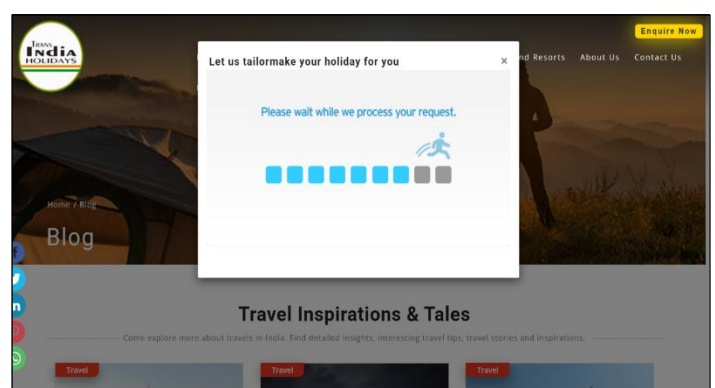

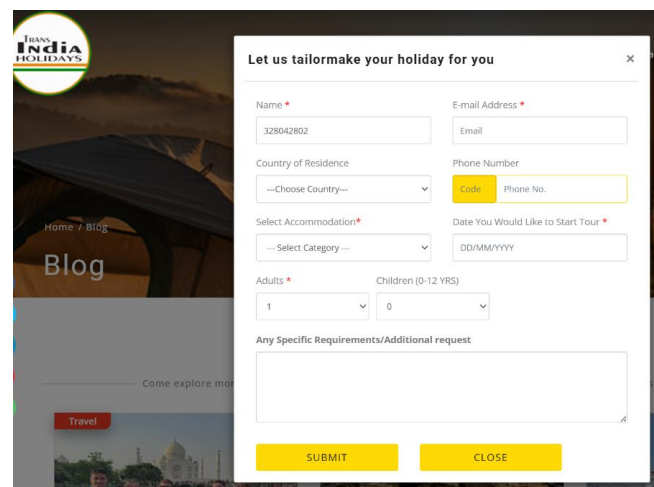

Actual Result

The application accepts numeric values and special characters in the **Name** field without displaying any validation error.

Bug #2: Enquiry Form Stuck on Processing

Description:

After submitting the enquiry form, the loading popup displays **"Please wait while we process your request"** indefinitely. The process never completes, and there is no success message, error message, or redirection.

Steps to Reproduce:

1. Open the website.
2. Click **Enquire Now**.
3. Fill in all the required details.
4. Submit the enquiry form.

Expected Result:

The enquiry should be submitted successfully, the loading popup should disappear, and the user should receive a confirmation message or be redirected.

Actual Result:

The loading popup remains on the screen indefinitely, and the request never completes.

Bug #3: Missing Human Verification on "Get in Touch" Form

Description:

The **Get in Touch** form allows submissions without any mechanism to verify whether the user is a real person. There is no CAPTCHA, email verification, OTP verification, or rate limiting. As a result, the form can be abused by bots or automated scripts to send a large number of unnecessary requests.

Steps to Reproduce:

1. Navigate to the **Contact Us** page.
2. Fill in the form with any valid-looking information.
3. Click **Send Message**.
4. Repeat the process multiple times.

Expected Result:

- The application should include a verification mechanism (e.g., CAPTCHA, reCAPTCHA, hCaptcha, email/OTP verification, or rate limiting) to prevent automated or spam submissions.
- Excessive requests from the same user/IP should be restricted.

Actual Result:

- The form accepts and submits requests without verifying whether the user is human.
- Multiple requests can be submitted, increasing the risk of spam and unnecessary server load.

The screenshot shows the 'Contact Us' page of Trans India Holidays. The page layout includes a header with the company name and a 'Get in Touch' form on the right. The form contains the following fields: Name, Email (with a placeholder 'carui@gmail.com'), Phone (with a placeholder '1381497198'), and a message box. A 'SEND MESSAGE' button is located at the bottom of the form. The page also features a 'Welcome to Trans India Holidays' section, 'Our Social' links, and 'Our Office' details for New Delhi.

Bug #4: Compilation Error When Opening "Call for Price" Tour Package

Description:

On the **Maldives Tour** page, clicking on a tour package with the "Call for Price" option redirects to a page displaying a **compilation error** instead of the package details.

Steps to Reproduce:

1. Navigate to the **Maldives Tour** page.
2. Select any tour package displaying the "Call for Price" label.
3. Click on the package.

Expected Result:

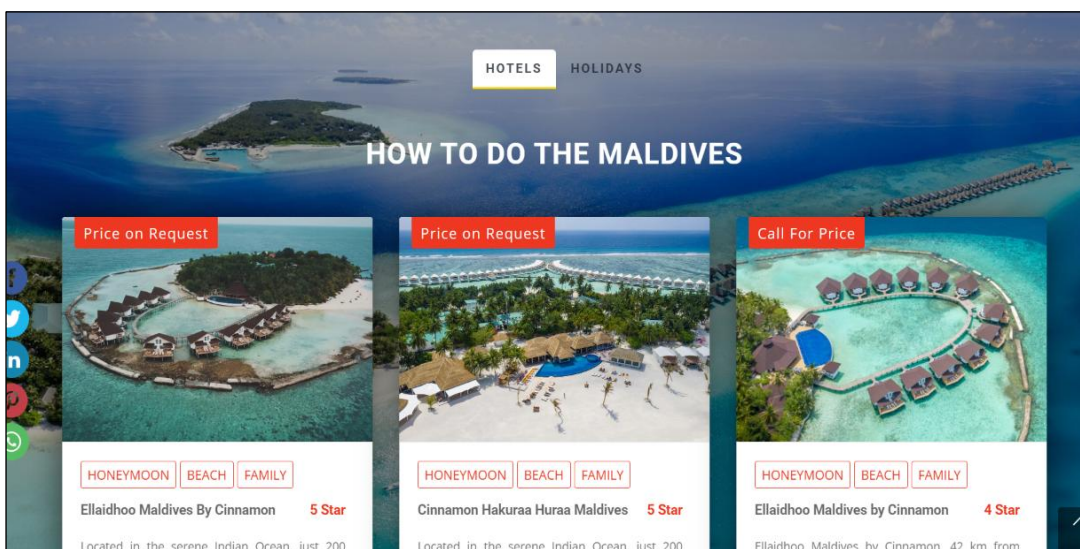

The selected tour package details page should open successfully, displaying the itinerary, pricing information (or contact details), and booking options.

Actual Result:

The website displays a **compilation error**, preventing users from viewing the package details.

Impact:

- Users cannot access the selected tour package.
- Booking inquiries for these packages cannot proceed.
- Creates a poor user experience and reduces customer trust.

Bug #5: Country Field Can Be Left Unselected

Description:

On the **Book A Trip** page, the **Country** field is marked as a mandatory field in the requirements. However, when the traveler leaves the **Country** field unselected, fills in all other mandatory fields, and clicks the **Submit** button, the application successfully submits the form instead of displaying a validation error.

Steps to Reproduce:

1. Navigate to the **Book A Trip** page.
2. Enter valid data in all mandatory fields except **Country**.
3. Leave the **Country** field unselected.
4. Click the **Submit** button.

Expected Result:

The application should display a validation error such as "**Country is mandatory.**" and prevent the form from being submitted until a valid country is selected.

Actual Result:

The application displays "**Submission Successful**" and submits the booking request even though the **Country** field is left blank.
